

How to install our apps on an Android phone

For Android phones and tablets (Samsung, Google Pixel, Motorola, Xiaomi and others). iPhones can't install these apps.

Step 1: Download App Bazaar

- 1 On your phone, open **Chrome** and go to **apps.bulkbazaar.ca**
- 2 Tap **App Bazaar**, then **Install**. If Chrome asks whether to keep the file, tap **Download anyway**.

Step 2: Install it

- 1 When the download finishes, tap **Open** (or open it from **Files > Downloads**).
- 2 If the phone says Chrome can't install apps, tap **Settings**, turn on **Allow from this source**, and go back.
- 3 Tap **Install**. If Play Protect warns you, tap **More details > Install anyway**. Then tap **Open**.

Step 3: Install any of our apps from App Bazaar

- 1 Open **App Bazaar**. It opens on **Phone apps**; tap **All apps** to see everything.
- 2 Tap **Install** on the app you want. Tap the picture first to read about it.
- 3 The first time only, Android asks to allow App Bazaar to install apps. Tap **Open settings**, turn on **Allow from this source**, and go back. The install continues by itself.
- 4 Tap **Install** (and **Install anyway** if Play Protect asks), then **Open**.

Step 4: Keep apps up to date

- 1 Apps with a newer version show **Update** in App Bazaar, and the **Updates** tab lists them. Tap **Update**, then **Install**.
- 2 New apps we add to App Bazaar appear in the app by themselves.

If something goes wrong

- 1 **"App not installed"**: uninstall the old copy (hold its icon › **Uninstall**), then install again.
- 2 **"Problem parsing the package"**: the download was cut off. Download it again on Wi-Fi.
- 3 **Samsung "Auto Blocker" is on**: **Settings › Security and privacy › Auto Blocker**, turn it off while installing.

All our apps are free. They come from App Bazaar, not Google Play, so Play Protect may show a warning; that is normal for apps installed this way.
